Group Member's Declaration

Group member's name: Uithiswary a/p Velan
Student ID: 1191202283

For the purpose of completing this assignment, I have performed the following tasks:

1. I have completed the introduction and compiling the report.
2. I have completed the dataset, graph and dashboard section in requirement 1.
3. I have done my part in the keynote address on visual 1 and visual 2 in requirement 4.
4. I have edited the final video and uploaded in youtube and submitted the project files.

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature:
Group member's name: Uithiswary a/p Velan
Date: 6 Feb 2025

Group Member's Declaration

Group member's name: Liew Zhi Tong
Student ID: 1211203835

For the purpose of completing this assignment, I have performed the following tasks:

1. I have completed the design implication for requirement 3 in the report.
2. I have completed the requirement 3 slides deck.
3. I have done my part in the keynote address on introduction and conclusion in requirement 4.

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature:
Group member's name: Liew Zhi Tong
Group member's ID: 1211203835
Date: 6 Feb 2025

Group Member's Declaration

Group member's name: Priveeta Gobi Krishnan
Student ID: 1211204549

For the purpose of completing this assignment, I have performed the following tasks:

1. I have completed the design implication, insights and SDGs for requirement 1 in the report.
2. I have done my part in the keynote address on Visual 3 and SDGs in requirement 4.
3. I have done requirement 4 in the report.

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature:
Group member's name: Priveeta Gobi Krishnan
Group member's ID: 1211204549
Date: 6 Feb 2025

Group Member's Declaration

Group member's name: Yeo Hui Yi
Student ID: 1211201569

For the purpose of completing this assignment, I have performed the following tasks:

1. I have completed the design implication for requirement 2 in the report.
2. I have completed the requirement 2 on poster.
3. I have done my part in the keynote address on initiatives and poster in requirement 4.

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature: Group member's name: Yeo Hui Yi
Group member's ID: 1211201569
Date: 6 Feb 2025

Introduction

Malaysia's governmental structure is formed by ministries which serve as specialized administrative sectors that convey policies into actionable outcomes for the citizens of Malaysia. There are 20 ministries like ministry of finance, ministry of defence, ministry of education and many more which focuses on specific sectors to ensure the nation's diverse needs are addressed systematically.

The ministry our group choose is Ministry of Finance. Ministry of Finance also known as MOF Malaysia is a central government institution which is responsible for managing nation's financial resources and economic policies. It was established in 1957 during Malaysia's Independence Day to manage national fiscal policies, government finance and economy of Malaysia. The ministry of finance main functions is to formulate and implement fiscal policies, managing tax systems, establishing financial management guidelines, coordinating international economic relations, and regulating credit reporting industry. Other functions include overseeing procurement, securing government funding, providing project advisory services and handling tax appealing to ensure sustainable economic growth.

MOF operates under ministerial leadership and collaborates with Bank Negara Malaysia (BNM) and other agencies to maintain economic stability. The current Minister of Finance is YAB Dato' Seri Anwar bin Ibrahim and Minister of Finance II is YB Senator Datuk Seri Amir Hamzah Azizan.

We have collected datasets from https://ekonomi.gov.my/en/socio-economic-statistics/economic-statistics/public-sector to make dashboard for our project. The data we collected was Federal Government Finance, Federal Government Revenue, Federal Government Operating Expenditure and Federal Government Development Expenditure from 2010 to 2022.

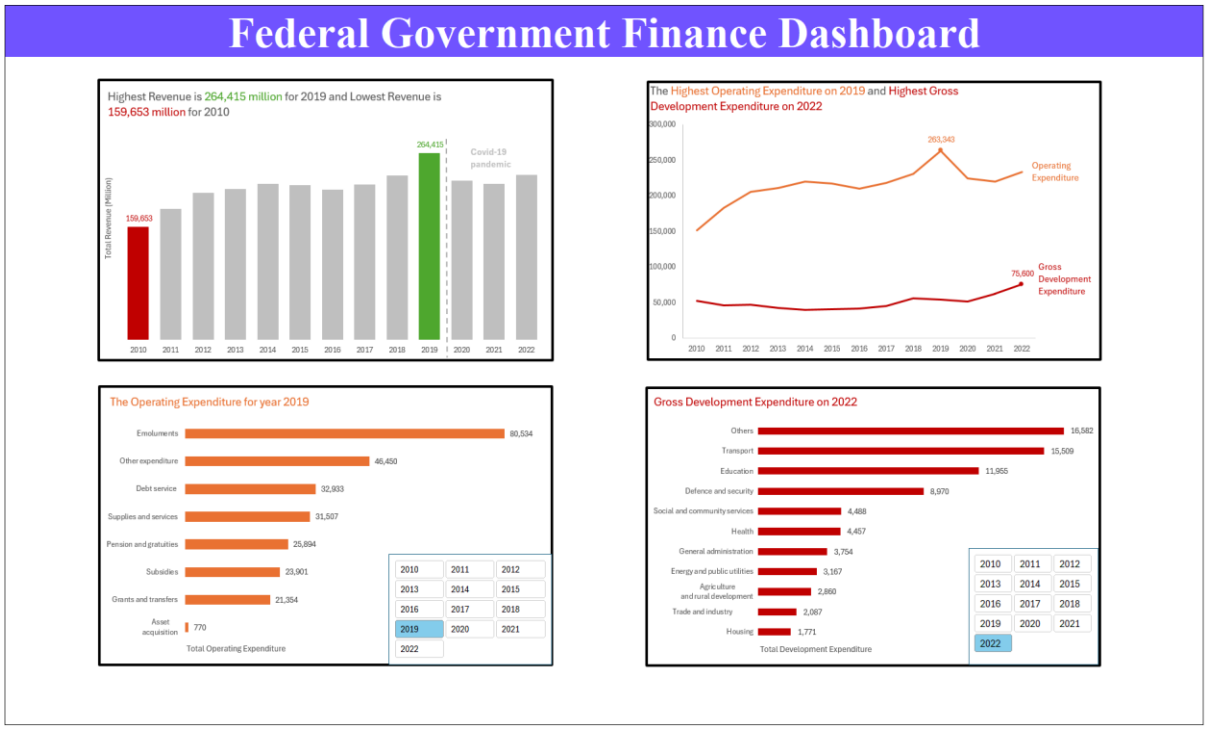
Federal Government Development Expenditure Data

1.0 Requirement 1



Federal Government Finance Dashboard

1.1 Design considerations

In the first chart, bar chart will be best since revenue can be portrayed in a clear trend over 2010 – 2022 timeline. Line graphs work best for continuous data since they point out trends in data and are therefore best displayed on. Removing all grid lines or applying as little as possible visually in the design is needed for the visual, clarity. By getting rid of gridlines, it allows the focus to be on the revenue trend line's path without visual distractions. One red colour column highlighted the lowest revenue while the green column highlighted the most revenue which is the year where it demands special attention by colour coding or annotation because it is the significant external shock by COVID-19 on revenue performance, we categorise it in our dataset. The annotation details interesting events that may cause a break from the pattern. Data labels help us do so with one glance at the graph and the use of labels is correct.

For the second chart there is a line chart for examining gross development expenditure against operating expenditure with time. That permits readers to watch the relationship among the two categories of spending and exactly how they evolve over the many years. Removing gridlines, keeping the view clean and uncluttered. That helps to keep the priority on the comparison of the two expenditure types. The two lines were differentiate using two different

colours red and orange. Orange for operating expenditure and red for development expenditure. Thus, we can notice immediately the difference between the two categories. The data labels and values on the peak points of each category tells us exactly when and how much the values were at. This is for precise understanding.

For our third chart, we use a horizontal bar chart, as this would be suitable for depicting the proportion of each category in relation to the operating expenditure of 2019. It is effective to show how total expenditure is segregated among various categories. Using grid lines may make the chart less appealing visually hence the removal of lines. To make the chart visually engaging and easy to interpret we also used a slicer in the graph to be able to move around the years to see the values differ from each other and understand the data from each year better. Each segment with actual values so there is no need for the viewer to guess. This is a way for the viewers to fully comprehend the exact breakdown of the expenditures. The orange colour was used due to the second graph indicating development expenditure is orange colour.

In the fourth graph, a horizontal bar pivot chart was used, as it will show the breakdown of development expenditure by category from the year 2010 to 2022. The bars are lined up horizontally in this format, so the lengths can be easily compared across sectors as they spend. As the bars themselves offer clear clues as to how they compare, no gridlines are required. This helps the chart to remain clean and easy to read by removing gridlines. A red colour was used in this graph due to the second graph where development expenditure is red colour. Data labels add values on each bar to ensure exact information. It reduces the viewers' need to compensate for the bar lengths to get the estimations of the values. The removal of the y-axis line and the x-axis line shows a noticeably clear representation of the graph with no extra unwanted lines.

1.2 Insights

In the first chart, the government revenue proves sensitive to outside events according to the data which shows the dramatic reduction in 2020 from COVID-19 pandemic effects. The government faces substantial risks because its revenue streams depend too heavily on sectors that experience negative effects during both international and local disturbances. To safeguard against potential revenue loss the government needs to spread its income across multiple sturdy industries including technological and digital sectors and renewable power systems. A revenue stabilization fund built by the government would serve as a buffer to protect essential services along with development projects when economic downturns occur.

In the second chart, the consistent dominance of operating expenditure over development expenditure indicates a structural imbalance in the budget. The recurring costs of salaries and pensions along with debt servicing payments consume a major portion of the budget so development projects receive minimal funding. The long-term progress of economic growth together with infrastructure development can be negatively impacted by this financial imbalance. The government needs to implement control measures for its public sectors to enhance operational efficiency by optimizing costs through administrative process reorganization and redundancy elimination while renegotiating debts. By using public-private partnerships the government can fund development projects which simultaneously reduce budget stress and speed up infrastructure building plans.

In the third chart, the considerable amount of public funds allocated to salaries and debt payments in 2019 exposes the government to a fiscal rigidity challenge because most budget resources remain fixed expenditures. Such distribution of funds restricts public body authorities from moving financial resources to sectors that require urgent attention including education and healthcare and infrastructure development. The government should establish performance-based pay structures and workforce optimization methods as parts of wage bill reforms to decrease personnel expenses. Development spending will benefit from debt restructuring and refinancing that reduces debt service charges. Such actions will generate necessary financing for projects which promote enduring national expansion.

For the final chart, education and transport receive significant budgetary attention because the government puts human capital development and infrastructure at the heart of their policy strategy. Social and economic needs risk not met attention since health care, agricultural and social programs receive minimal public funding. The government needs to reassess its expenditure priorities for balanced advancement by distributing more money into under resourced regions. Better healthcare infrastructure funding alongside increased agricultural technological investments would create better health results and main security outcomes. The government needs to develop performance monitoring strategies which confirm development fund resources reach their designated targets and deliver their specified results.

1.3 Sustainable Development Goals (SDGs)

1.3.1 SDG 4: Quality Education

The objective strives to deliver inclusive education of high quality while spreading educational opportunities for all stages of life. The government places education at the forefront as a priority because human capital development remains crucial for advancing both economic prosperity and society-wide progress. Through educational investments the government supports the fundamental targets of SDG 4 through the implementation of quality primary and secondary education alongside vocational training upgrading and better educational facilities. The government needs to conduct teacher training, update curriculums and work on reducing educational inequalities affecting rural regions and disadvantaged locations to completely meet targets set by SDG 4. The expansion of educational benefits throughout the population will minimize social disparities while promoting upward movement between diverse social classes.

1.3.2 SDG 9: Industry, Innovation and Infrastructure

The objective of this goal involves establishing infrastructure which resists damage while simultaneously supporting inclusive sustainable industrial developments alongside innovation promotion. Transport infrastructure investment remains crucial to the government because it creates better connections and develops trade while providing market access needed for economic growth. The unspecified funds support technology development and innovation since these elements propel industrial advancements and productivity improvements. The government needs to implement renewable energy projects and create smart urban centres along with R&D funding to achieve complete fulfilment of SDG 9. Public-private partnerships allow the government to speed up infrastructure development at lower public expense.

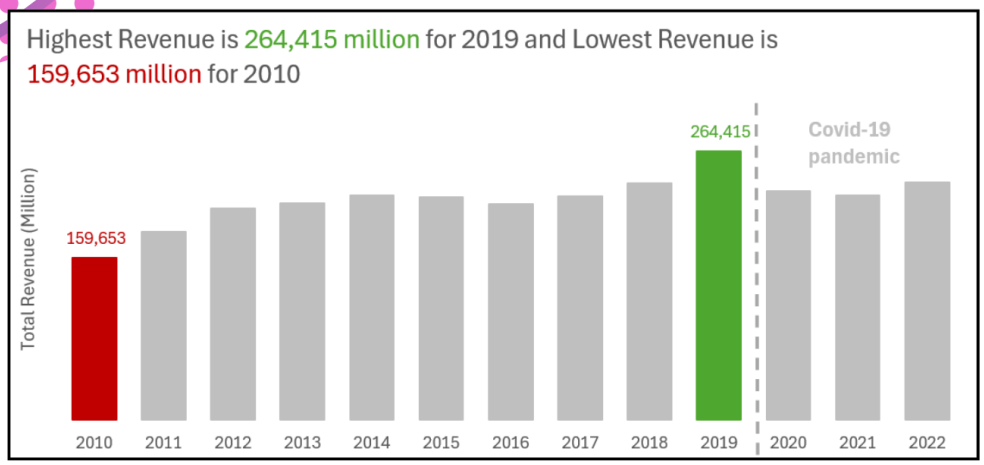
1.3.3 SDG 17: Partnerships to Achieve the Goal

Partnerships to Achieve the Goal that aims at strengthening worldwide partnerships for sustainable development. Because high operating expenses and limited development funding produce financial constraints the government stands alone in achieving its development objectives. Mobilization of resources requires the creation of partnerships between the government and private sector organizations along with international and civil society groups for the implementation of sustainable development projects. Public-Private Partnerships serve as funding mechanisms for large infrastructure development that international organizations implement with technical support to fund social programs. Partnerships that the government

creates enable the government to access external expertise and resources which boosts its development goal effectiveness.

2.0 Requirement 2

STRENGTHENING GOVERNMENT REVENUE FOR A SUSTAINABLE FUTURE



The government's revenue is easily affected by outside events. The outbreak of COVID-19 in 2020 caused a big drop. This shows we need to find more ways to earn money, set up a savings fund and not depend too much on certain industries. This will help the economy strong and steady.

Key Insights & Actionable Steps:

1. **Find more ways to earn money**: Do not rely on weak industries. Invest in technology, digital jobs & clean energy.
2. **Set up a savings fund** : Save money to keep key services & projects running during difficult times.
3. **Work with private companies**: Partner with businesses to pay for big projects and ease the budget load.

Sustainable Development Goal (SDG)

#SustainableFuture #StrongEconomy #SDG

Poster for 2025 Malaysia Sustainable Future Summit

2.1 Design Implications

The poster uses capital letters for the headline. This makes it easy to see. The purple text is easy to see on a white background. The bright colours make the poster stand out. The SDG icons are on a simple background can make to look neat. The layout is clear. The headline, steps and SDG parts are easy to find. The revenue chart shows important data. It uses red and green to show the lowest and highest years. This can get attention from audience. These colours help audience notice key points. The key steps easy to see because of bold words. The mix of words and pictures make the poster easy to understand. The elements are placed in an ordered way. This makes it look neat. The mix of words, pictures and a chart help different audience understand the message. The design is simple and clear. This makes it good for many audiences.

3.0 Requirement 3

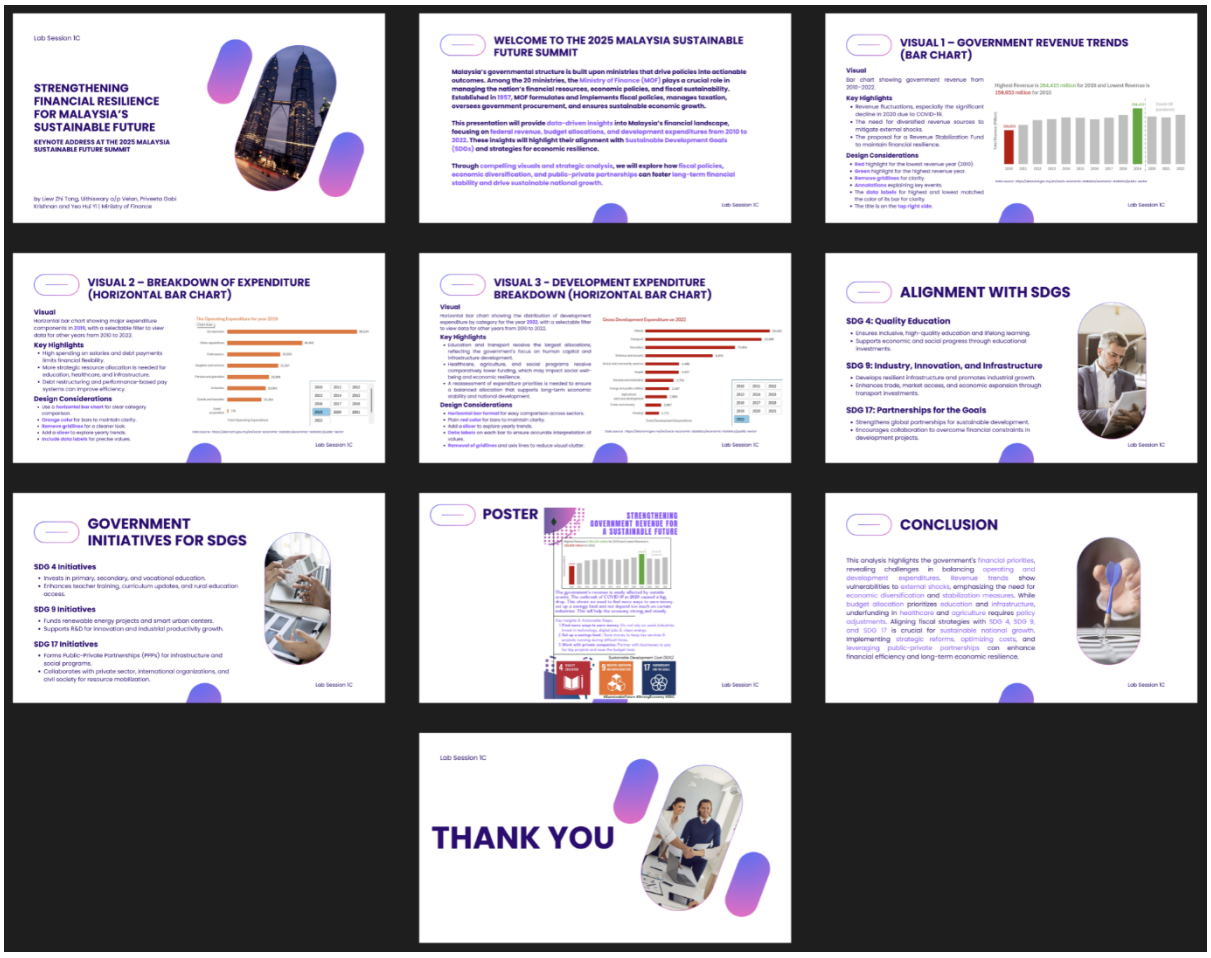


Figure 3.1 Slide Deck Dashboard for 2025 Malaysia Sustainable Future Summit

3.1 Design Implications

The slide deck for the keynote address at the 2025 Malaysia Sustainable Future Summit has been designed to maximize clarity, engagement, and effectiveness in conveying financial resilience strategies. Each slide plays a crucial role in ensuring a seamless flow of information, using structured design elements and visual enhancements to captivate the audience.

The cover page sets the tone for the presentation by establishing an authoritative and professional image. Featuring the Ministry of Finance's logo alongside the summit's title, it creates a strong first impression. The use of bold typography and a balanced color scheme ensures immediate clarity, reinforcing the credibility of the presentation.

Following the cover page, the introduction slide provides a structured overview of the Ministry of Finance's role in economic sustainability. A high-contrast background enhances readability, while bullet points allow for quick comprehension of key points. This ensures that the audience is immediately engaged and prepared for the insights that follow.

To illustrate key financial trends, the first visual, a bar chart displaying government revenue fluctuations, is carefully designed to highlight critical years using red and green accents. The strategic use of annotations provides context for significant economic events, making it easier for the audience to grasp the implications of revenue changes over time. Additionally, gridlines are minimized to reduce clutter, ensuring a cleaner and more focused visual.

In addition to revenue analysis, understanding government expenditure is crucial for evaluating financial priorities. The second visual, a horizontal bar chart, is chosen for its intuitive format, making it easy to compare expenditure categories. A neutral orange color scheme ensures clarity without unnecessary distractions, while data labels enhance readability. Furthermore, an interactive slicer allows viewers to explore yearly expenditure trends dynamically, adding an element of engagement to the presentation.

Building on the analysis of expenditure, the third visual focuses on development expenditure distribution. Another horizontal bar chart is used to highlight sectoral allocations, with red color-coding emphasizing areas requiring policy reassessment. The inclusion of data labels and annotations ensures precise interpretation, while an interactive filter enables comparison across different years. This design choice helps policymakers assess investment priorities more effectively.

To reinforce the relevance of financial policies in achieving sustainability goals, the alignment with SDGs slide is designed with clear sectioning. Icons and visual elements are used to enhance comprehension, connecting financial strategies with specific sustainable development goals. This approach ensures that the audience can easily link fiscal policies with broader national objectives.

Furthermore, the government initiatives slide categorizes key projects under respective SDGs, ensuring an organized presentation of efforts toward sustainable development. The use of consistent formatting and bullet points enhances readability, while minimalistic icons help maintain a visually uncluttered slide, allowing the audience to quickly absorb essential information.

The poster slide, which summarizes key insights, is designed to be visually appealing and impactful without requiring extensive textual explanation. It serves as a quick reference point for the audience, ensuring that the main takeaways are retained effectively.

As the presentation concludes, the final slide is structured to leave a lasting impact. Key takeaways are presented using bullet points, ensuring clarity, while a well-balanced color scheme maintains visual consistency. The conclusion reinforces the message with a call to action, encouraging the audience to reflect on the insights shared.

Finally, the thank you slide is designed with a minimalist approach, featuring a professional closing statement alongside the Ministry's branding. This ensures a strong and respectful conclusion to the presentation, leaving the audience with a clear and positive final impression.

Overall, the slide deck employs strategic design elements to enhance engagement, readability, and comprehension. By integrating preattentive attributes such as color differentiation, annotations, and clear typography, the presentation effectively communicates key financial insights, supporting informed decision-making and fostering discussions on Malaysia's sustainable financial future.

4.0 Requirement 4

The keynote address was conducted by Uithiswary Velan, Priveeta Gobi Krishnan, Liew Zhi Tong and Yeo Hui Yi for "2025 ASEAN SUSTAINABLE FUTURE SUMMIT'. This is the link for keynote address https://www.youtube.com/watch?v=iZz__i5Zmec.
